

Secure Your Active Directory from End to End

Secure even the most complex Active Directory and Azure Active Directory from end to end. Ensure all identities, the sensitive data they provide access to and the underlying AD infrastructure are clean, understood, properly configured, closely monitored and tightly controlled — making your life easier and the organization more secure.

GAIN CONFIDENCE IN YOUR AD SECURITY POSTURE

Reduce the risk of a security breach by identifying and mitigating security gaps in your AD configurations, policies, objects and more, before bad actors exploit them.

DETECT AND CONTAIN EVEN ADVANCED THREATS IN TIME

Curb the impact of Active Directory security incidents by quickly detecting and containing threats — even sophisticated attacks that circumvent security logs.

RECOVER FAST TO ENSURE BUSINESS CONTINUITY

Make sure the business remains operational by rolling back unwanted changes to Active Directory or recovering an entire domain in a flash.

CUSTOMER FEEDBACK

“Netwrix has become a proxy set of eyes and ears monitoring for anomalous Active Directory and Group Policy activity. The volume of information it sorts through would require someone spending 4–8 hours per week. At the rate I pay for MSP support, that equates to savings of \$1,200–\$2,400 per month. Netwrix is a huge benefit for the company from the perspective of security, risk mitigation and cost-effectiveness.”

Spencer Andrews
IT Director, EventLink

Key Features

WHY NETRIX?

AD SECURITY ASSESSMENT

Strengthen your security posture by identifying and prioritizing risks, such as misconfigured security policies and improper privilege assignments — so you can remediate the gaps before attackers exploit them.

ZERO STANDING PRIVILEGE

Slash your attack surface by eliminating standing privilege — a vital part of a broader Zero Trust strategy. Instead, grant admins temporary access with just enough privilege to complete the task at hand.

COMPLETE SOLUTION

Secure your Active Directory from end to end, on premises and in the cloud, with a solution that addresses all the key functions of IT security: Identify, Protect, Detect, Respond and Recover.

PASSWORD POLICY ENFORCEMENT

Avoid credential compromise by enforcing strong password rules and preventing users from choosing weak and leaked passwords — all without hurting user or helpdesk productivity.

REAL-TIME THREAT DETECTION

Detect even advanced AD threats, including DCSync, Golden Ticket, DCShadow and Kerberoasting attacks, in time to take action to protect vital systems and data.

DOMAIN EXPERTISE

Sleep well by choosing a vendor with over a decade of experience keenly focused on the security of Active Directory and critical data.

AUTOMATED THREAT RESPONSE

Contain incidents before they turn into security breaches by blocking risky changes and automating response actions, such as disabling or locking an account.

ENSURE BUSINESS CONTINUITY

Avoid business disruptions by rolling back unwanted changes to Active Directory objects or attributes in a flash. Recover your AD forest from a secure backup even if your DCs have been encrypted or completely wiped out by ransomware.

ECOSYSTEM INTEGRATIONS

Get the most out of your previous investments by easily integrating Netrix solutions with your SIEM and other security tools.

OUTSTANDING CUSTOMER SUPPORT

Get your issues definitively resolved by our knowledgeable customer support team, which has earned a 97% satisfaction rate.
